Cleaning & Caring For Your Anodized Aluminum

Anodized aluminum is easy to clean – just flush the surface with water using moderate pressure. If the material still doesn't look clean try using a brush or sponge with water. If you still have visual dirt – try a mild detergent like the ones listed below along with a brush or sponge and fresh water. Clean first in a horizontal motion, and then with a vertical motion. Rinse thoroughly.

Recommended Cleaning Agents

- Henkel SC110LF
- 10% Ammonium
- Mineral Spirits
- Organic Cleaners
- Acetone
- Henkel Ridoline 212
- Methanol
- PH-Neutral Solvents
- MEK

Keep Your Warranty Fresh

Maintaining your anodized aluminum is an important component to maintaining your twenty-year limited warranty. Document each time you clean your anodized aluminum. (Required at least annually.)

All of us at Lorin Worldwide are dedicated to bringing our customers the best possible value in aluminum and anodized aluminum solutions. We know that you have choices, and we remain committed to making Lorin Industries your choice for your aluminum needs.

Please contact Lorin Industries with any questions. We would be happy to assist you.
